University of St. Gallen, Switzerland

MA in Quantitative Economics and Finance, 2017

Chelyabinsk State University, Russia

Diplom (MSc) in Mathematical Methods in Economics and Operations Research, 2013. Distinction

Published Papers Strategic Arbitrage in Segmented Markets (with S. Bryzgalova and A. Pavlova).

The Journal of Financial Economics, 166, 2025.

We propose a model in which arbitrageurs act strategically in markets with entry costs. In a repeated game, arbitrageurs choose to specialize in some markets, which leads to the highest combined profits. We present evidence consistent with our theory from the options market, in which suboptimally unexercised options create arbitrage opportunities for intermediaries. Using transaction-level data, we identify the corresponding arbitrage trades. Consistent with the model, only 57% of these opportunities attract entry by arbitrageurs. Of those that do, 49% attract only one arbitrageur. Finally, our paper details how market participants circumvent a regulation devised to curtail this arbitrage strategy.

Retail Trading in Options and the Rise of the Big Three Wholesalers

(with S. Bryzgalova and A. Pavlova). The Journal of Finance, 78(6), 2023, pp. 3465-3514.

We document a rapid increase in retail trading in options in the U.S. Facilitated by payment for order flow (PFOF) from wholesalers executing retail orders, retail trading recently reached over 60% of the total market volume. Nearly 90% of PFOF comes from three wholesalers. Exploiting new flags in transaction-level data, we isolate wholesaler trades and build a novel measure of retail options trading. Our measure comoves with equity-based retail activity proxies and drops significantly during U.S. brokerage platform outages and trading restrictions. Retail investors prefer cheaper, weekly options, with the average bid-ask spread of a whopping 12.6%, and lose money on average.

Benchmarking Intensity (with A. Pavlova).

The Review of Financial Studies, 36(3), 2023, pp. 859–903. Editor's Choice.

Benchmarking incentivizes fund managers to invest a fraction of their funds' assets in their benchmark indices, and such demand is inelastic. We construct a measure of inelastic demand a stock attracts, benchmarking intensity (BMI), computed as its cumulative weight in all benchmarks, weighted by assets following each benchmark. Exploiting the Russell 1000/2000 cutoff, we show that changes in stocks' BMIs instrument for changes in ownership of benchmarked investors. The resulting demand elasticities are low. We document that both active and passive fund managers buy additions to their benchmarks and sell deletions. Finally, an increase in BMI lowers future stock returns.

Working Papers The Hidden Cost of Stock Market Concentration: When Funds Hit Regulatory Limits (with L. Pastor and J. Wang).

Sparse Portfolios and Benchmarking in Corporate Bond Markets (with Z. Li and A. Pavlova).

Institutional Investor Mandates, Securities Lending, and Short-Selling Constraints

Two APs Are Better Than One: ETF Mispricing and Primary Market Participation (with E. Gorbatikov)
