

Taisiya Sikorskaya

Assistant Professor of Finance

University of Chicago Booth School of Business ◊ 5807 South Woodlawn Avenue, Chicago, Illinois 60637

Academic Positions	University of Chicago Booth School of Business, United States Assistant Professor of Finance, 2024 - present
Education	London Business School, United Kingdom PhD in Finance, 2024 London Business School, United Kingdom MRes in Finance, 2019 University of St. Gallen, Switzerland MA in Quantitative Economics and Finance, 2017 Chelyabinsk State University, Russia Diplom (MSc) in Mathematical Methods in Economics and Operations Research, 2013. <i>Distinction</i>
Refereeing	Review of Financial Studies; Management Science; Journal of Empirical Finance
Other Work Experience	Bank of England, London, UK PhD Intern (part-time), 08/2021–04/2022 London Business School Teaching Assistant (part-time), 2018–2021 London School of Economics Research Assistant to Prof. Dimitri Vayanos (part-time), 2020–2021 London Business School Research Assistant to Prof. Svetlana Bryzgalova (part-time), 2020 ThirdYear Capital GmbH, Munich, Germany Global Macro Analysis Intern, 01/2017–04/2017 Deutsche Asset Management, Deutsche Bank UK Assistant Portfolio Manager, ETF Portfolio Management, 10/2015–09/2016 Deutsche Asset Management, Deutsche Bank Switzerland Working Student (part-time), Credit Portfolio Management, 10/2014–10/2015
Awards and Honours	Top Finance Graduate Award, 2024 Colorado Finance Summit Best Paper Award, 2023 <u>European Economic Association Econ JM Best Paper Award, 2023</u> <u>AQR Asset Management Institute Fellowship Award, 2022</u> <u>Finalist for the Crowell Prize, PanAgora Asset Management, 2022</u> <u>Professor Sir James Ball PhD Award, London Business School, 2021</u> <u>Fellowship for Doctoral Students, London Business School, 2017–2023</u> <u>The STARR International Foundation Grant, Switzerland, 2013–2014</u> The President of Russia Award for Outstanding Students (awarded twice), 2012 The City Administration Award (Chelyabinsk, Russia), 2010
Published Papers	<u>Retail Trading in Options and the Rise of the Big Three Wholesalers</u> (with S. Bryzgalova and A. Pavlova). <i>The Journal of Finance</i> , 78(6), 2023, pp. 3465–3514. We document a rapid increase in retail trading in options in the U.S. Facilitated by payment for order flow (PFOF) from wholesalers executing retail orders, retail trading recently reached over 60% of the total market volume. Nearly 90% of PFOF comes from three wholesalers. Exploiting new flags in transaction-level data, we isolate wholesaler trades and build a novel measure of retail options trading. Our measure comoves with equity-based retail activity proxies and drops significantly during U.S. brokerage platform outages and trading restrictions. Retail investors prefer cheaper, weekly options, with the average bid-ask spread of a whopping 12.6%, and lose money on average. Benchmarking Intensity (with A. Pavlova).

The Review of Financial Studies, 36(3), 2023, pp. 859–903. *Editor’s Choice*.

Benchmarking incentivizes fund managers to invest a fraction of their funds’ assets in their benchmark indices, and such demand is inelastic. We construct a measure of inelastic demand a stock attracts, benchmarking intensity (BMI), computed as its cumulative weight in all benchmarks, weighted by assets following each benchmark. Exploiting the Russell 1000/2000 cutoff, we show that changes in stocks’ BMIs instrument for changes in ownership of benchmarked investors. The resulting demand elasticities are low. We document that both active and passive fund managers buy additions to their benchmarks and sell deletions. Finally, an increase in BMI lowers future stock returns.

Institutional Investors, Securities Lending, and Short-Selling Constraints

Institutional ownership is thought to facilitate short-selling, as short sellers typically borrow from the holdings of institutions. Yet, institutional demand, and hence lending supply, is endogenous. This paper isolates changes in this demand due to investment mandates (benchmark indexes) to shed new light on the role of institutions in lending markets. In a model with benchmarked fund managers who supply their risky holdings for lending, the equilibrium price and lending supply are both higher for the benchmark asset. Larger supply alleviates short-selling constraints while higher shorting demand (due to inflated price) exacerbates them. Two quasi-natural experiments, the Russell index reconstitution and the Bank of Japan purchases, confirm that stocks with more institutional capital benchmarked against them have larger lending supply and demand. Ultimately, they are *costlier* to short. In both theory and data, results are driven by incomplete pass-through from institutional holdings to lending supply.

Received: European Economic Association Econ Job Market Best Paper Award (2023), Top Finance Graduate Award (2024)

Strategic Arbitrage in Segmented Markets (with S. Bryzgalova and A. Pavlova).

Revise & Resubmit at *The Journal of Financial Economics*.

We propose a model in which arbitrageurs act strategically in markets with entry costs. In a repeated game, arbitrageurs choose to specialize in some markets, which leads to the highest combined profits. We present evidence consistent with our theory from the options market, in which suboptimally unexercised options create arbitrage opportunities for intermediaries. Using transaction-level data, we identify the corresponding arbitrage trades. Consistent with the model, only 57% of these opportunities attract entry by arbitrageurs. Of those that do, 49% attract only one arbitrageur. Finally, our paper details how market participants circumvent a regulation devised to curtail this arbitrage strategy.

(Subsumes ‘Profiting from Investor Mistakes: Evidence from Suboptimal Option Exercise.’)

Two APs Are Better Than One: ETF Mispricing and Primary Market Participation

(with E. Gorbatiukov)

Exchange-traded funds (ETFs) depend on arbitrageurs to correct deviations between a fund’s price and its fair value. ETFs have designated brokers, or authorized participants (APs), who have a unique right to create and redeem ETF shares, and who can thus trade on ETF mispricing without risk. Using novel regulatory filings, we provide the first description of the US ETF-AP network. It has a dense core and a sparse periphery, and the observed creation/redemption volumes are highly concentrated. The level of mispricing in a US equity ETF is negatively related to the fund’s primary market diversity, especially during times of high market volatility. Funds that share more APs exhibit stronger mispricing comovement. We theoretically show that diverse primary markets help mitigate the effect of shocks to AP-specific arbitrage costs. We highlight the importance of AP balance sheet usage costs in ETF markets by exploiting the Federal Reserve’s purchases of bond ETFs in 2020.
